

# EnerDynamic Hybrid Technologies Awarded Expert Preferred Vendor Status

Toronto, Ontario--(Newsfile Corp. - January 8, 2018) - EnerDynamic Hybrid Technologies Corp. (TSXV: EHT) ("**EHT**") today is pleased to announce that it has been awarded Expert Preferred Vendor Status ("**EPV**") by De Sousa Costa International Inc. ("**DeSC**").

DeSC is a registered services provider consulting firm with the Clean Development Mechanism (CDM) of the United Nations Framework Convention on Climate Change (UNFCCC), DeSC helps sovereign clients through the complex process from concept to the final application for registration of their projects and the issue of Certified Emission Reductions (CERs) credits, a tradable commodity which DeSC sovereign clients place with designated International Financial Institutions (IFIs), who fund these capital intensive projects.

DeSC over the last few months has been working with EHT to finalize a design that will provide a Net Zero environmentally compliant sub-economic housing program in a number of developing countries that have seen a spiral of informal residences areas spring-up in and around major metropolitan areas. As new jobs are created as a result of the series of projects being undertaken in these countries, Housing will play an ever-increasing role in the program. EHT has now become part of DeSC's growing network of EPVs, which include major Canadian, USA, British and European Union multi-nationals and small-medium enterprises (SMEs), manufacturers, consultants, engineering procurement contractors and material suppliers with a proven track record of high quality deliverables domestically and internationally.

EHT, using its proprietary fire-retardant skin and solar embedded roof system, in the design of these homes that can be easily assembled in less than an hour. The houses are being designed to accommodate a family of five people, providing its own off-grid energy and lighting.

Mr. Alberto de Sousa Costa, Ph.D., President and CEO of DeSC said, "We have looked over the last 12 months at many different designs and types of housing programs that meet the urgent requirements of our sovereign clients, and dire need to replace overcrowded informal residential areas and over taxed city infrastructures. With the DeSC RippleModel™ Program, as new projects are initiated, new housing will be created and it is expected that a large number of people will move into these new EnviroNomic™ housing complexes."

Mr. John Gamble, EHT's CEO, commented that "We are very pleased to work with DeSC and use our EHT Enertec materials to help people improve their living standards in developing countries."

## About EnerDynamic Hybrid Technologies

EHT delivers proprietary, turn-key energy solutions which are intelligent, bankable and sustainable. EHT's expertise includes the development of its ENERTEC module structures with full integration of smart energy solutions. Using a proprietary skin and foam core that is stronger than traditional wood or steel structural insulated panels, EHT provides exceptional thermal energy efficiency in modular homes, cold storage facilities, residential/commercial out buildings and emergency/temporary shelters. EHT works with its partners worldwide to erect the buildings on-site utilizing EHT staff and local crews. In addition to traditional support to established electrical networks, ENERTEC buildings excel where no electrical grid exists.

## About ENERTEC

The EHT advanced ENERTEC Modular Wall and Roof System uses a proprietary skin and foam core that is stronger and more energy efficient than traditional wood or steel structures providing the highest ratings for energy efficiency. EHT works with its partners worldwide to erect the buildings on-site utilizing EHT staff and local crews. After installation, each structure can be furnished and finished to meet the customer's requirements including siding, tile, kitchens and bathrooms or segregated commercial rooms. The finished wall product can be shipped on pallets and delivered via rail, truck or water in standard formats.

At the core of the ENERTEC product line is the ENERTEC Embedded Solar Roof Module. Solar cells can be embedded in a proprietary fire proof skin resulting in substantial cost savings by eliminating heavy glass panels and aluminum racking required for traditional solar panels. Two barriers to greater adoption of solar energy are weight limitations of the roof on which solar panels could be deployed and onerous shipping and labour costs. A lighter product at a better price point will open a larger market for solar due to the faster return of capital investment especially for rural and remote users looking to go off-grid. Furthermore, the entire EHT embedded solar roof becomes a massive solar panel capable of producing significantly more energy than the home requires, allowing the structure to then become an important source of power for the local micro grid or large battery storage systems.

## About De Sousa Costa International Inc.

DeSC is a results oriented consulting firm committed to delivering value to its sovereign clients and EPVs. The DeSC's team is a diverse group of intellectually curious, analytically rigorous, and collaboratively committed professionals. DeSC builds interdisciplinary teams with the right mix of industry, project management, finance, and functional expertise to disrupt and break through the status quo. Together with our sovereign clients and our EPVs, we spark the unexpected, build partnerships that exceed expectations, through continuous improvements and creativity, streamlining operations and delivering value on the ground and where it counts.

The DeSC RippleModel™ Program focuses on funding major environmentally driven, multi-level, fully integrated infrastructure development and capacity building projects in emerging markets that meet the criteria of the UNFCCC / CDM for registration, provided these are sustainable, reduce dependence on the use of fossil fuels for energy, create new job opportunities for everyone and significantly reduce poverty with positive results, whilst reducing the inherent financial risks associated with such undertakings if approached as a singular project.
